1. About the policy

Water is a precious resource essential for life, agriculture, and sustainable development. As stewards of the environment, UPL recognizes the critical importance of responsible water management in ensuring a sustainable future. Our Water Conservation Policy is rooted in the principles of stewardship, efficiency, and environmental sustainability. Through this policy, we reaffirm our commitment to conserving water resources, minimizing wastage, and promoting responsible water use across our operations. With a firm dedication to mitigating water-related risks and preserving this vital resource for future generations, we strive to lead by example in sustainable water management practices.

1.1 Water Conservation Policy

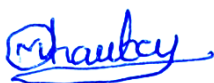

We, at UPL, are committed to continual improvement in conserving water resources by establishing a sustainable water management system to enable continuous, effective, and widespread implementation of the best water conservation practices within the organization. The processes and procedures adopted shall enable the establishment of measurable water reduction targets without compromising reliability, human comfort, health, and safety. The scope of the policy covers all facilities, personnel, and technology that support technical, manufacturing, and project activities.

Water Conservation Policy Guidelines:

- To consume water responsibly, efficiently, and in an environmentally friendly manner.
- To promote the recycling, reduction, and reuse of water, and to upgrade equipment as necessary at all our manufacturing facilities.
- To ensure regular monitoring and reporting of water usage at both local & global level to track progress towards reduction targets.
- To progressively reduce overall specific water consumption sustainably each year, accounting for changes in activity levels, weather, and other relevant factors.
- To integrate water management with business objectives and allocate resources to enhance water reduction performance.
- Consideration of water footprint reduction strategies in product design, development, and packaging.
- To phase out the use of groundwater and ensure Zero Dependency on ground water sources.

- To ensure compliance with all relevant legislation pertaining to water and other specific requirements.
- Continual research and development efforts to explore innovative solutions for water conservation and efficiency improvements.
- Education and awareness programs for employees and stakeholders on the importance of water conservation and ways to reduce water consumption.
