

WATER CONSERVATION POLICY

We, at UPL are committed to continual improvement in conserving water resource by establishing a sustainable water management system to enable continuous, effective and widespread implementation of best water conservation practices within organization. The process and procedure adopted shall enable establishment of measurable water reduction targets without compromising Reliability, Human comfort, Health and Safety.

The scope of policy covers all facilities, personnel and technology that supports technical, manufacturing and project activities.

Water Conservation Policy Guidelines:

- To consume water in responsible, effective and environmental friendly way.
- To promote recycle, reduce and reuse of water, upgrade equipment(s) as appropriate for all our all manufacturing facilities.
- To reduce overall specific water consumption sustainability with each passing year after taking into account changes in levels of activities, weather and other relevant factors.
- To integrate water management with business objectives and to provide resources to improve water reduction performance.
- To comply with all relevant legislations relating to water and other specific requirements.
- To provide periodic training and information to relevant staff in water conservation.

A handwritten signature in blue ink, appearing to read 'Raj Tiwari', is written over a faint blue circular stamp.
